Each hospital, $\tau^2$=0.05
GHB, $\varepsilon$=1
GHB, no DP
Global model (pooled, no DP)
Excess log-loss relative to local
$10^0$
$10^2$
Hospital size $n_k$
Mean over hospitals and replicates
Local (anchor prior only)
Global model
GHB, $\varepsilon$=1
GHB, no DP
Mean excess log-loss (nats)
$10^{-1}$
$10^{-2}$
$10^{-2}$
$10^{-1}$
Heterogeneity $\tau^2$ (per coefficient)
