TabuLLM: Comprehensive Augmentation Audit

1. Executive Summary

This report consolidates the results of the TabuLLM data augmentation pipeline across 1 datasets. The objective is to audit the fidelity, diversity, and privacy of the synthetic data generated via LLM inference.

Metric	Consolidated Value
Total Datasets	1
Global Avg Fidelity	85.2%
Pipeline Status	Test Run

2. Dataset Audit: wide_dataset.csv

Dataset Profile & AI Insights

This is a test for wide datasets.

Generation & ML Configuration

Parameter	Selected Value
Gen: Algorithm	gemma-3-4b
Gen: Tone	Professional
Gen: Consistency	Strict
ML: type	Random Forest
ML: n_estimators	100

Quality & Fidelity Metrics (Mean ± Std)

Stability Metric	Score (aggregated)
Fidelity	88.1%
Privacy	92.0%
